Will Burchard, Usability Analyst with Oregon Employment Department, has released an article detailing Oregon’s median household income. Oregon’s median household income has been very close to the U.S. over the past 30 years. There hasn’t been a statistical difference between Oregon and U.S. household incomes in most years. However, Oregon’s job growth has been stronger than the U.S. since 2013, and the average hourly real wage started rising in 2015. The better job market helped propel Oregon’s median wage to $63,494 in 2014-2015, higher than the U.S. median household income of $58,435. Oregon’s median remained higher than the U.S. in 2017-2018, coming in at $67,675 compared with the U.S. figure of $63,024. Read the full article report here.
