### Oregon's Trade Profile, 2025

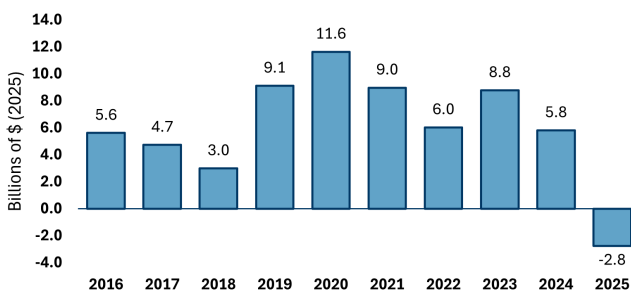

Exports as share of state gross domestic product, 2025

Sources: USA Trade Online, U.S. Census Bureau  
U.S. Bureau of Economic Analysis

Exports as a share of gross state product is a good indicator of trade's relative importance to a state's economy. In 2025, exports accounted for 8.2% of Oregon's state GDP, and Oregon ranked 10th across the nation. For many years, Oregon experienced a trade surplus, meaning the value of exports from the state was larger than the value of imports coming into the state. This changed in 2025 when Oregon saw a trade deficit of \$2.8 billion. The primary industry contributing to trade in Oregon is computer and electronic products. Compared to 2024, this industry saw a 21% decrease in total value of exported products and a 23% increase in the total value of imported products in 2025.
